

Contents

Foreword	iv
Introduction	1
NIST Center for Neutron Research Layout	2
Chronology of the NCNR in Photographs	4
Research Highlights	
Measurement of the Free Neutron Lifetime	6
ETS-4: Maxwell's Zeolite	8
Measuring Stress Relief in Electron Beam Weld Joints of Superalloys	10
EXPGUI: Smoothing the Path to Powder Crystallography	12
Neutron Diffraction Contributes to Improving the Fatigue Life of Bridges	14
Capillary Neutron Lens for Prompt Gamma Activation Micro-Analysis	16
Giant Anharmonicity and Electron-Phonon Mediated Superconductivity in MgB ₂ at 39 K	18
Polaron Formation and Colossal Magnetoresistance in Manganites	20
Ferromagnetism and Spontaneous Vortex Formation in Superconducting ErNi ₂ B ₂ C	22
Structure of Local Spin Excitations in a Geometrically Frustrated Antiferromagnet	24
Pressure-Induced Phase Transition of C ₁₂ E ₅ Micelles	26
Probing the Structure of Aerosol Nanodroplets	28
Nanoporous Ultra-Low Dielectric Constant Materials	30
Neutron Reflectivity Studies of Surfactants at Electrode Surfaces	32
Magnetic Semiconductor Superlattices	34
Pinpointing Chiral Structures With Front/Back Polarized Neutron Reflectometry	36
The Nature of Vibrational Softening in α -Uranium	38
Native and Partially Unfolded Proteins: Neutron Inelastic Scattering and Simulations	40
Atomic Motions in Confined Polymer Films	42
Tuning the Properties of Carbon Nanotubes by Deformation	44
Serving the Scientific and Technological Communities	46
The NCNR User Program	46
The Center for High Resolution Neutron Scattering	46
Summer School on Methods and Applications of Neutron Spectroscopy	47
Collaborations	47
Independent Programs	48
Operations	50
Instrumentation Developments	51
The Advanced Cold Neutron Source	51
Development of an Air-Pad and Floor System for New Neutron Spectrometers	52
Development of an Intercalated Graphite Monochromator	52
NCNR Computer and Software Environment	53
Sample Environment Team	55
Publications	56
Instruments and Contacts	72
Contacts	Inside Back Cover
